VisiSpecs is a powerful suite of applications designed to streamline the documentation, coordination, and verification of BIM models, project specifications, and other construction documents. Built with user feedback and continuous improvements, VisiSpecs integrates seamlessly with familiar software, minimizing training and setup time. With no need for complex document conversions, users can link master and project documents directly to their BIM models—achieving true integration without modifying the models. This results in fewer RFIs and addenda, reducing project risks and delays.

VisiSpecs Cloud solution, powered by Microsoft Azure, allows for fast, firm-wide deployment—taking hours or days instead of months or years. IT teams save resources, and users can test the software with their existing project models and documents. With cloud-based access, distributed project teams can collaborate effortlessly, ensuring the right people have the right information when they need it.

VisiWord® brings the power of BIM-integrated specification editing into the familiar Microsoft Word environment. Users can import existing Word and PDF documents—or entire projects—and immediately leverage VisiSpecs' publishing, coordination, and automation tools. Features like automated headers/footers, cover pages, and table of contents simplify document creation.

With centralized document management, user access controls, and real-time collaboration, VisiWord offers the most advanced spec editing platform available. Any Word document can be enhanced with VisiSpecs' tools, helping teams centralize project information. Supporting documents—such as images, cut sheets, schedules, submittals, and videos—can be organized in a customizable project structure and linked to relevant model elements and materials.

BIM is transforming the AECO industry, optimizing processes and analysis across the entire asset lifecycle. **But what about project documentation?** VisiSpecs is the only solution that intelligently links project documents to model elements and materials—enhancing access, collaboration, coordination, and management for seamless project delivery.

KEY BENEFITS

- Improved Design Quality
- Save Design Time & Cost
- Reduce Errors & Omissions
- Fast & Easy Implementation
- Free Specification Masters

VisiRevit® empowers Autodesk® Revit® users to efficiently coordinate, collaborate, and verify that BIM models and project documents remain in sync—without disrupting existing workflows or requiring additional resources.

With direct model linking and **NO BIM MODEL CHANGES**, users can leverage the free Revit Viewer to automate, link, and verify construction documents alongside the model before submission. VisiSpecs offers intuitive grouping features for similar elements and advanced search tools to quickly find the right specifications for each project.

Effortless Collaboration

Project teams can work directly within the applications they already use—Revit and Microsoft Word—ensuring seamless integration from design through construction and facility management.

Powerful Multi-User Keynote Management

VisiSpecs includes a Multi-User Keynote Manager, automating keynote assignments while ensuring cloud-synced accuracy across teams. Available in VisiWord and VisiRevit, this tool offers:

- ✓ Smart search and filtering for quick access to keynotes
- ✓ Duplication checks, spell checker, and user modification tracking
- ✓ BIM model keynote usage indicators for enhanced coordination
- ✓ Zoom-to-Keynote functionality for specifiers and non-Revit users to view element and material properties with ease

By streamlining keynote placement and assignment, VisiRevit helps teams save time and reduce costs, ensuring all elements and materials are properly documented in the Link Console. With these enhanced tools, model and documentation coordination becomes effortless.

Link Your Current BIM Model & Project Documents **TODAY**

VisiSpecs supports Windows 7 and newer, Word 2013 and newer, and the three most recent versions of Autodesk Revit.

Benefactors	Key VisiSpecs Features
Architects & Engineers	<ul style="list-style-type: none"> • Use Microsoft Word with automated editing & publishing tools • Centralize your library of cut sheets, projects & owner preferences • Improved product delivery through linked documents & models • Publish ALL submission docs without exporting to third party tool
Specification Consultants	<ul style="list-style-type: none"> • Content & format-neutral for all your projects & masters • Clients easily provide comments, markups, cut Sheets & more • Automate linked paragraphs, bracket options & project docs • Research, select, and collaborate with ANY manufacturer
Owners & Developers	<ul style="list-style-type: none"> • Centrally manage design preferences & templates • Collaborate through design, construction & asset management • Lower your design & construction costs • Recognize your asset's revenue potential faster
Contractors	<ul style="list-style-type: none"> • Estimate & bid easier with linked models, specs & documents • Access linked model & specs in the field • Create as-builts & commissioning linked to models
Building Product Manufacturers	<ul style="list-style-type: none"> • NEW BPM Program in 2025, putting you in front of top design firms • Promote your products during the specification writing process • Feature your products in the Building Product Selector • Collaborate with designers WHILE they write project specs
